Consolidated Financial Results

1. Qualitative Information on Consolidated Financial Results for the Nine-month Period under Review

(1) Qualitative Information on Consolidated Business Results

The following is an overview of the economic environment for the nine-month period ended December 31, 2020.

In the first six months ended September 30, 2020, lockdowns and other measures were adopted around the world in an attempt to prevent the spread of the COVID-19 pandemic. As a result, with the exception of China, where authorities quickly halted the spread of infections, economic activities in many countries were significantly restricted and the global economy rapidly contracted. Governments subsequently eased restrictions incrementally and economic activities resumed, which led to a temporary improvement in business conditions in many countries. However, the results of these efforts to curb the spread of infections varied and economic conditions accordingly differed from country to country.

From the second half of the fiscal year, the pace of the spread of infections increased rapidly, exceeding the pace seen in the first half, particularly in Europe and North America, and measures to curb the spread were further strengthened. As a result, concerns about a re-deterioration of the economy have increased in these regions. During this time, the Chinese economy continued to steadily recover. Meanwhile, vaccines were rolled out in some countries in an effort to contain the spread.

In response to this economic downturn—said to be the worst of the post-war era—governments and central banks employed all manner of policy measures, including fiscal stimulus on an unprecedented scale, to prop up household finances, corporations, and financial markets. The swift and large-scale rollout of fiscal and monetary policies meant the financial markets avoided turmoil and share prices even staged a rally in some cases, in stark contrast to the sharp downturn in the real economy. On the whole, the improvement in corporate and consumer sentiment continued, but towards the end of the year concerns also began to emerge about diminishing policy effects.

As for primary commodity prices, the price of crude oil saw a temporary heavy decline in April but then gradually recovered thereafter on production cuts and expectations for the resumption of economic activity. In contrast, prices for copper and iron ore, which are strongly influenced by the Chinese economy, increased on the whole.

This is mainly due to the earnings increase in Energy and Metals & Mineral Resources resulted from the higher-than-assumed commodity prices in oil, copper and others, due as well to the earnings increase in Agri Business against the backdrop of higher grain prices, in addition to the stronger-than-expected performances in Food and Chemicals and others.

Based on this result, the Company has revised the consolidated earnings forecast for the fiscal year ending March 31, 2021 as follows, factoring in the near-term uncertainty stemming from the ongoing spread of COVID-19.

<The Company's Assumptions Including the Spread of COVID-19 and When the Pandemic Might End>

While the impact of COVID-19 on our business operations varies depending on the business domain and country/region, it remains unclear as to when the pandemic might end. The business environment surrounding the Company has started to recover after sharply deteriorating in the first half of the fiscal year ending March 31, 2021. We expect it to continue to recover only gradually in the second half, and the impact of COVID-19 to linger through the fiscal year ending March 31, 2022.
