	Brazilian Real	¥0.7 bn (¥1/Brazilian real)	33.00			29.02	30.00	29.51

(*1) As the crude oil price affects our consolidated results with a 0-6 month time lag, the effect of crude oil on consolidated results is estimated as the Consolidated Oil Price, which reflects this lag. For the year ending Mar/2019 we have assumed that there is a 4-6 month lag for 51%, a 1-3 month lag for 40%, and no lag for 9%. The above sensitivities show annual impact of changes in Consolidated Oil Price.

(*2) As Mitsui has very limited exposure to U.S. natural gas sold at Henry Hub (HH), the above sensitivities show annual impact of changes in the weighted average sale price.

(*3) U.S. gas figures for 19/3 H1 are the Henry Hub Natural Gas Futures average daily prompt month closing prices traded on NYMEX during January – June 2018.

(*4) HH price of US\$2.93/mmBtu is assumed for sale prices linked to the HH price.

(*5) Iron ore price assumptions are not disclosed

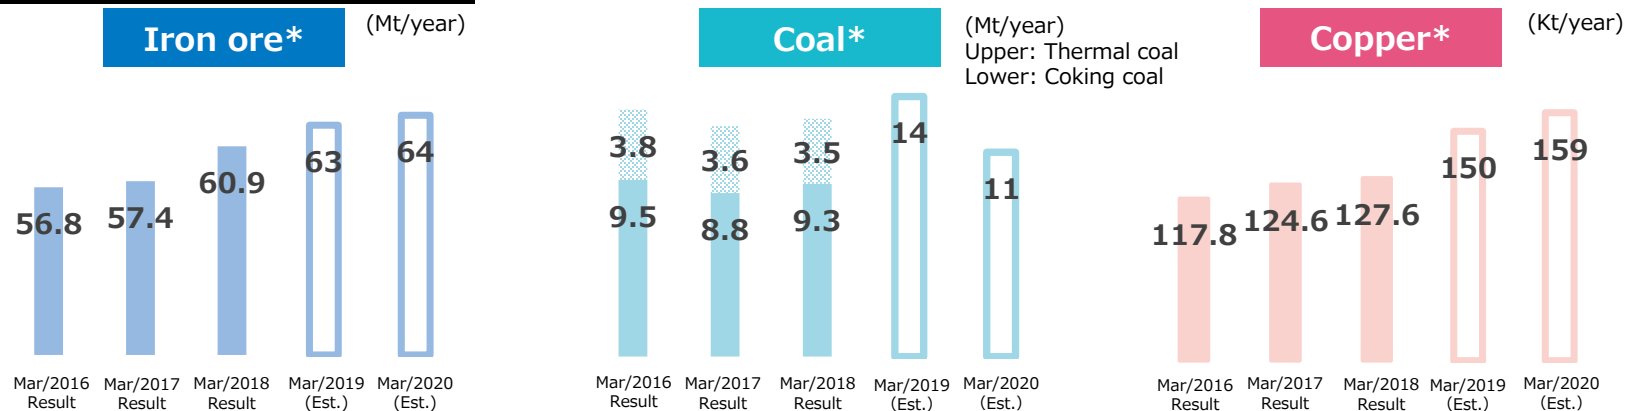

(*6) Iron ore results figures for 19/3 H1 are the daily average (reference price) spot indicated price (Fe 62% North China) recorded in several industry trade magazines from April to September 2018.

(*7) Copper results figures for 19/3 H1 are the averages of the LME monthly average cash settlement prices for the period from January to June 2018.

(*8) Impact of currency fluctuations on reported profit for the year of overseas subsidiaries and equity accounted investees denominated in functional currencies. Depreciation of the yen has the effect of increasing profit for the year through the conversion of profit for the year of overseas subsidiaries and associated companies (denominated in functional currencies) into yen. In the Metal Resources and Energy business where the sales contract is in US\$ the impact of currency fluctuations between the US\$ and the functional currencies (Australian \$ and Brazilian Real) and the impact of currency hedging are not included.
