CAUTIONARY STATEMENT REGARDING FORWARD-LOOKING INFORMATION

In this material, statements made with respect to current plans, estimates, strategies and beliefs and other statements that are not historical facts are forward-looking statements about the future performance of Astellas Pharma. These statements are based on management's current assumptions and beliefs in light of the information currently available to it and involve known and unknown risks and uncertainties. A number of factors could cause actual results to differ materially from those discussed in the forward-looking statements. Such factors include, but are not limited to: (i) changes in general economic conditions and in laws and regulations, relating to pharmaceutical markets, (ii) currency exchange rate fluctuations, (iii) delays in new product launches, (iv) the inability of Astellas to market existing and new products effectively, (v) the inability of Astellas to continue to effectively research and develop products accepted by customers in highly competitive markets, and (vi) infringements of Astellas' intellectual property rights by third parties.

Information about pharmaceutical products (including products currently in development) which is included in this material is not intended to constitute an advertisement or medical advice. Information about investigational compounds in development does not imply established safety or efficacy of the compounds; there is no guarantee investigational compounds will receive regulatory approval or become commercially available for the uses being investigated.

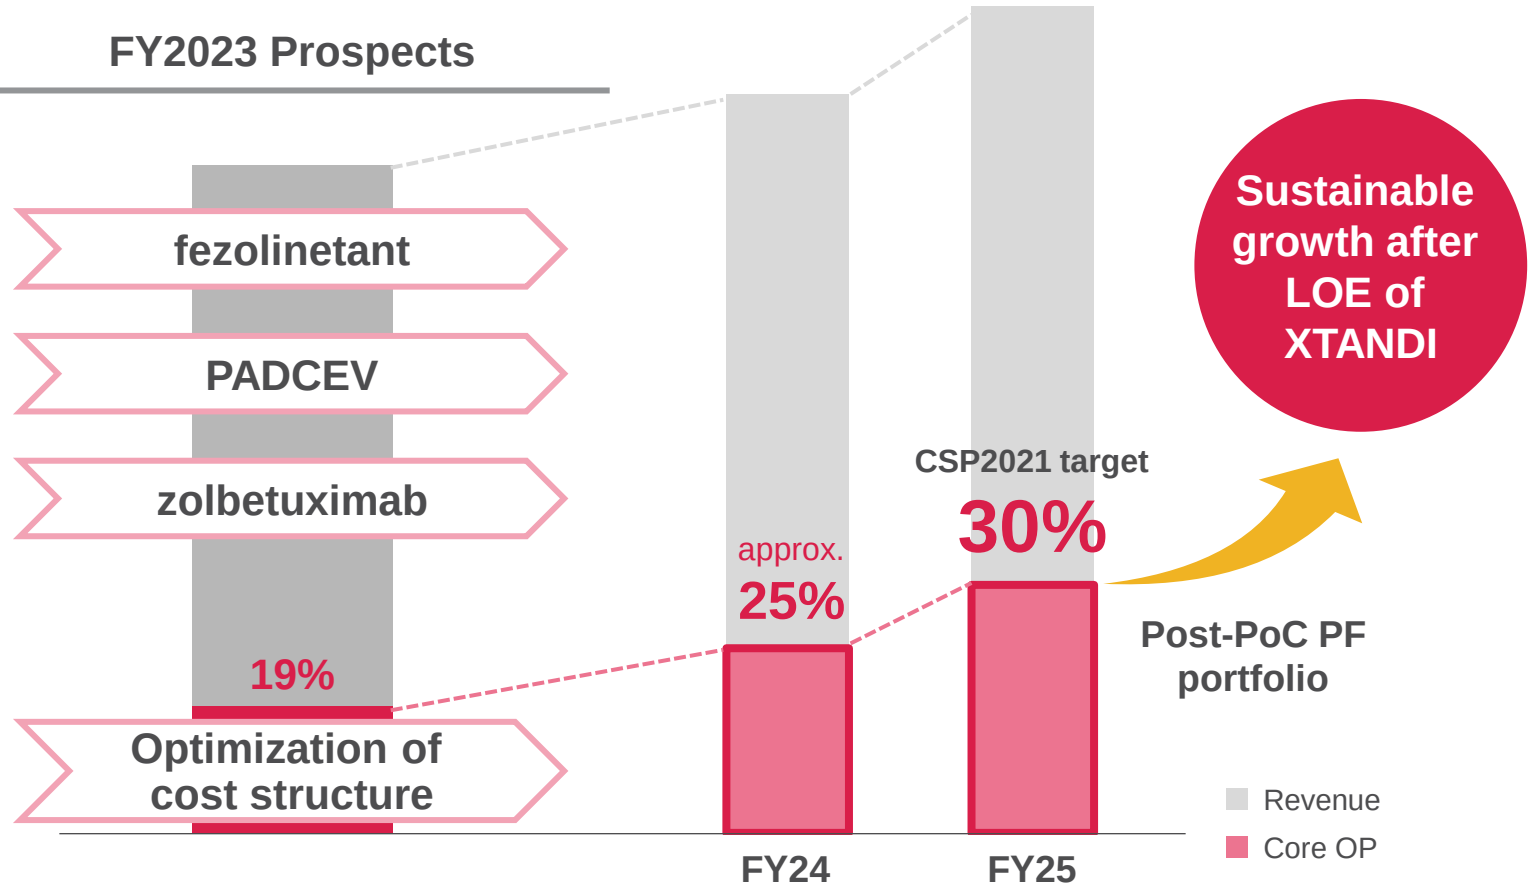
TOWARD ACHIEVEMENT OF CSP2021

- *Continue commitment to CSP2021*
- *FY2023 is the turning point to ensure growth from FY2024 onwards*

FY2022 Review

- Core results in line with expectations, but slightly behind full-year forecast
- fezolinetant NDA, PADCEV sBLA, successful zolbetuximab Phase 3 studies
- Established new PF "Targeted Protein Degradation"
- No PoC obtained in FA projects

FY2023 Prospects



Approval of PADCEV sBLA for first-line metastatic urothelial cancer in US is Apr 2023.
CSP: Corporate Strategic Plan, NDA: New Drug Application, sBLA: Supplemental Biologics License Application, PF: Primary Focus, PoC: Proof of concept, FA: Focus Area, LOE: Loss of exclusivity

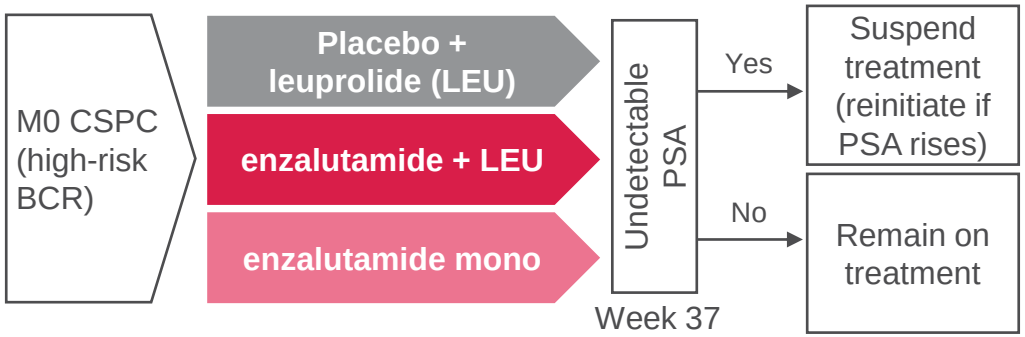
ENZALUTAMIDE/XTANDI: LATEST STATUS

- *Aiming for regulatory submission in US as well as Europe, based on the positive topline results from EMBARK study*
- *Revised potential peak sales upward to 700 billion yen*

EMBARK study

- Study design



- Topline results
  - ➢ Met primary endpoint of MFS (enzalutamide + LEU vs. placebo + LEU)
  - ➢ Positive trend in key secondary endpoint of OS (not yet mature)
  - ➢ Met other key secondary endpoints
    - MFS (enzalutamide mono vs. placebo + LEU)
    - Time to PSA progression
    - Time to first use of new antineoplastic therapy

Future plan

- EMBARK data presentation: AUA 2023 on Apr 29
- Regulatory submission: targeting mid-2023 in US and 2H FY2023 in Europe

Update of sales forecast

- Updated sales forecast by incorporating sales trend so far, M0 CSPC submission plan in Europe and FX rate trend
- Potential peak sales: over 700 billion yen*
  - ➢ Sales contribution from M0 CSPC：40-50 billion yen

* Previous forecast: 600-700 billion yen

CAPITAL ALLOCATION

1. Top priority is investment for business growth

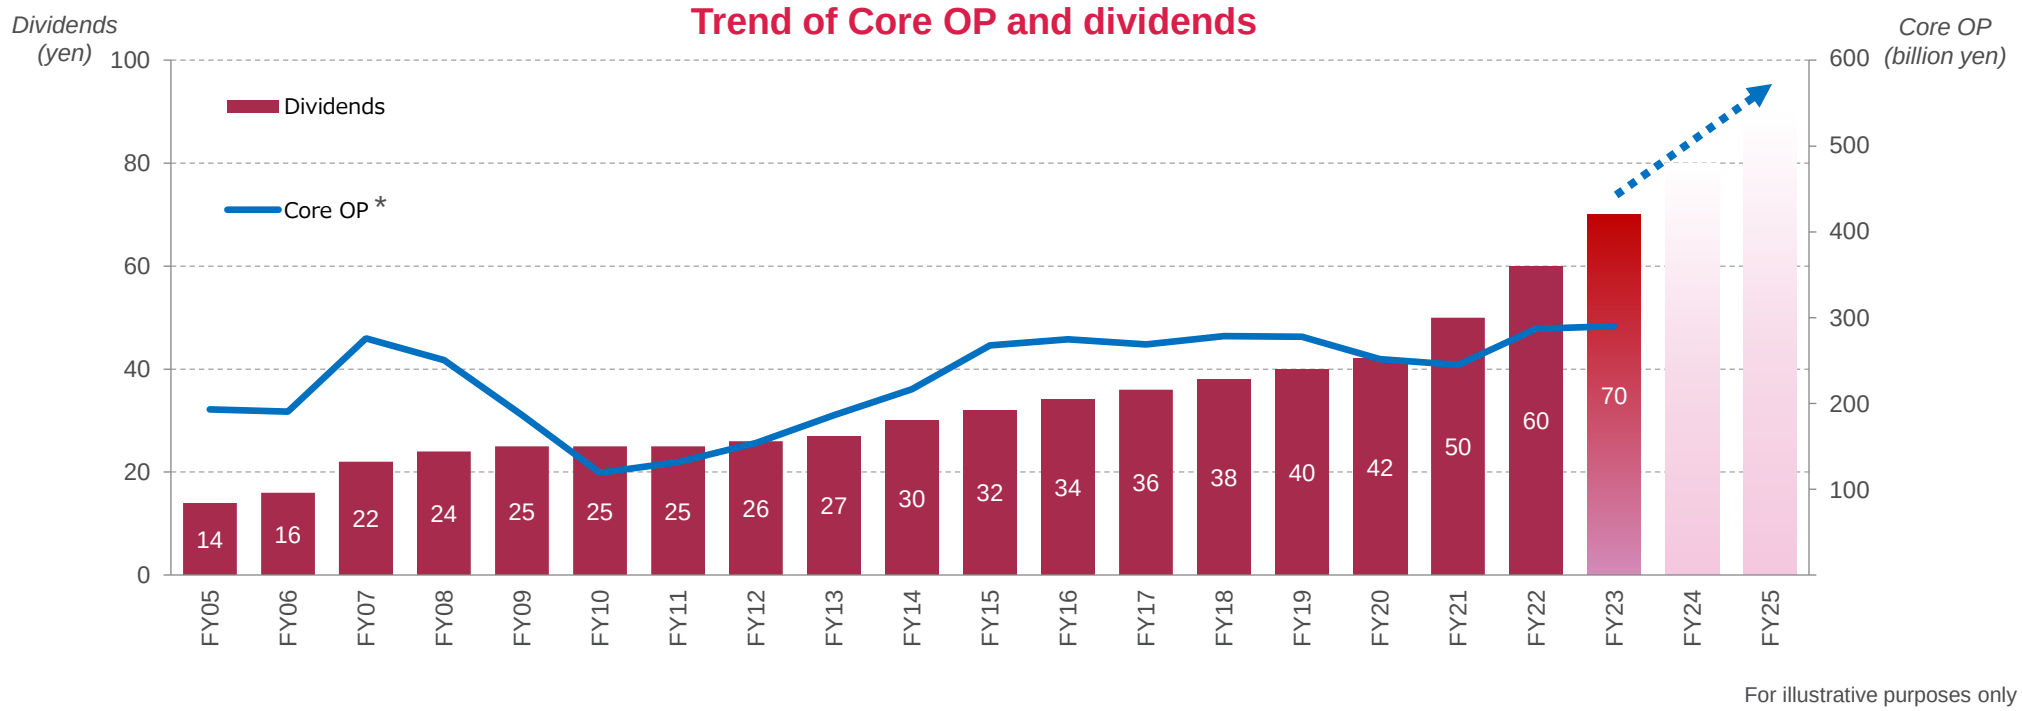
2. Raise dividend level aligned with profit / cashflow plan and actual performance throughout CSP2021 period

3. Flexibly execute share buyback by excess cash

Acquisition of own shares announced in Feb. 2023

- From Feb 7 to Mar 15, 2023
- 26.18 million shares
- 50.0 billion yen

Aiming for higher level of dividends increase during CSP2021 aligned with the robust profit growth forecast



For illustrative purposes only

* Prior to FY2012, operating profit is in accordance with J-GAAP

ZOLBETUXIMAB: ANTI-CLAUDIN 18.2 MONOCLONAL ANTIBODY

Target: Claudin 18.2

- Claudin is a major structural component of tight junctions and seals intercellular space in epithelial sheets
- Broadly expressed in various cancer types
  - ✓ Prevalence of patients with high expression of Claudin 18.2 is substantial: 38%
  - ✓ ~60% of primary pancreatic adenocarcinomas; ~20% of these meet the eligibility criteria for the ongoing Phase 2 study

Gastric and GEJ adenocarcinoma

- Target patient population:
  HER2-, Claudin 18.2+ locally advanced and metastatic gastric and GEJ adenocarcinoma
- Metastatic gastric cancer is an area of significant unmet need, especially in advanced stages with ~6% five-year survival rate at Stage IV and treatment options are limited

	Gastric and GEJ adenocarcinoma	**P3: SPOTLIGHT**	NCT03504397	First line, Combo with mFOLFOX6, DB, vs. placebo	n=566	Topline results obtained in Nov 2022

FEZOLINETANT: NK3 RECEPTOR ANTAGONIST

(Red: Updates since the last financial results announcement)

VMS has a significant negative impact on QoL

- Physical symptoms include hot flashes and night sweats, which can impact sleep.
- Physical symptoms may lead to emotional impact including embarrassment, irritability, anxiety, and sadness
- Symptoms have a negative impact on multiple aspects of everyday life [1]

Women's Health Initiative (WHI) Study [2]

- Initial data analyses showed an association between chronic HRT use and increased risk of cardiovascular disease and breast cancer
- Since WHI's findings, use of HRT has dropped
- Although subsequent analysis of the WHI data have demonstrated that HRT is safe and effective when initiated in the appropriate patient in the appropriate manner (i.e. right time, formulation, dose and duration), prescriptions have not rebounded, leaving some women with minimal options to satisfactorily manage their VMS

AT132 (RESAMIRIGENE BILPARVOVEC): rAAV8-Des-hMTM1

Characteristics of AT132

- Delivers a functional copy of human MTM1 gene by AAV8 to transfect and express myotubularin in skeletal muscle cells
- Regulatory designations granted:
  - ✓ <US> RMAT, Rare Pediatric Disease, Fast Track, and Orphan Drug designations
  - ✓ <Europe> PRIME and Orphan Drug designations

X-linked myotubular myopathy (XLMTM)

- Rare neuromuscular disease with X-linked, loss of function mutations in MTM1 gene
  - ✓ Approximately 1 in 40,000 to 50,000 newborn males
  - ✓ Estimated 50% mortality by 18 months
